Tasha has an amazing family with a husband and two kids. Though it isn't as bad as it once was, Tasha's oldest son is very sick.

When her child becomes very ill she then has to make a decision on whether or not to contact emergency services

After going back and forth, Tasha calls for an ambulance through our app. Because of this we have decided to add a gps factor within our app.

Due to our app having personalized profiles for every user, the EMS workers already know what kind of procedure needs to be done, and how to properly treat the patient.

Because of the personal profile, and the GPS modes in our app, the doctor was able to start procedures right away and was able to save the child's life.

Dixie Normous By Landon Evans

Dixie is going about her daily life cooking meth, and a freak accident in the meth lab causes an explosion.

Dixie was critically injured in the explosion, but thankfully our app has an explosion sensor built into the app and instantly notified ems and firefighters of her location and that there was an explosion. The sensors that are placed through the house notified the fire department of the raging fire in the house.

Now that Dixie has arrived at the hospital, all of her medical records have been sent to the hospital via the application on her phone. Since she is still unconscious and cannot answer questions, the app has everything she may be allergic to or any other medical record that may interfere with her treatment.

Dixie's family has now arrived to see their loved one and thanks to our app they have her room number and directions to get to her room once they are inside the hospital since hospitals are busy and can be quite chaotic

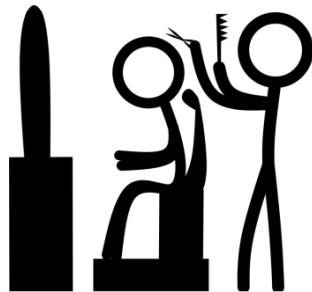

Dixie's family finds her wide awake and doing good in the recovery room but thanks to our fast-acting application on her phone ems were able to get her to the hospital and treat her for minor injuries.

Tony is now successfully signed into the hospital and getting the treatment he needs to live and play more videogames in the future. His doctors know exactly what to give him and what not to give him too.

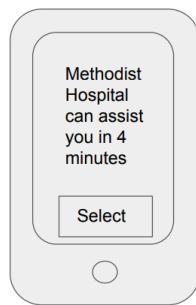

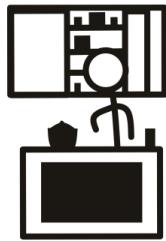

Chris has been working really hard and not paying attention to his health. All his attention is drawn to his job and kids. He really doesn't want there to come a time when he is in need of quick healthcare but has to wait.

publicdomainvectors.org

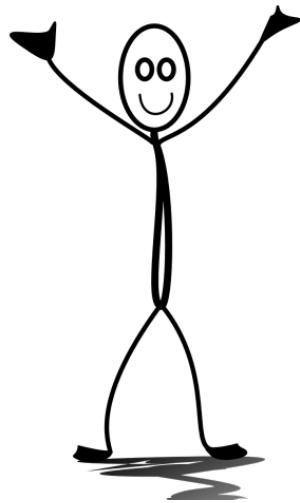

His wife notices his diminishing health and downloads the quick health app just in case there is an emergency.

While Chris is cooking one day he just passes out. His kids called his wife and she came running to aid. She pulls out her phone and then looks at the app to see which hospital in the area would be able to get him the quickest help.

She is able to get in contact with Methodist hospital and they send an ambulance to their house in less than 4 minutes!

They are able to get to chris before he passes away and make him priority and save his life.
